FINAL YEAR PROJECT

TITLE: A Unified Citizen Service Access Platform with Dynamic Appointment Scheduling and Smart Notification Guidance

App Name: s

Main Theme:

- locate nearby public and financial service centers.
- view available services.
- book appointments (if supported).
- receive smart notifications and reminders.
- manage service visits efficiently.

Goal:

1. Simplify access to public services.
2. Reduce unnecessary visits.
3. Improve planning through appointment coordination.

GPCU:

G-Gapness:

Current platforms are fragmented:

- Users must check multiple apps/websites for different services.
- Many locator apps do not support appointment booking.
- No unified platform combining location + booking + notifications.
- Users often visit centers without knowing availability or requirements.

P-PROBLEM STATEMENT:

Public service access is fragmented across multiple platforms, making it difficult for citizens to locate services, manage appointments, and receive timely updates. A unified system is needed to centralize service discovery, streamline appointment coordination, and improve access efficiency through structured notifications.

C — COMPARISON WITH EXISTING SYSTEMS

1. Jan Dhan Darshak

- shows financial service locations.
- lacks appointment booking.
- lacks notification system.

2. Passport Seva Portal

- appointment booking exists.
- limited to passport services only.
- not multi-service.

3. Practo

- healthcare-focused only.
- not suitable for government/public services.

4. Google Maps

- shows locations.
- no structured service workflow.

U — UNIQUENESS

1. Unified multi-service platform.
2. Centralized appointment booking system.
3. Smart notification system (reminders, updates).
4. Citizen-centric interface.
5. Multi-domain integration (banks, govt offices, CSC, healthcare, etc.).
